

# Is your supply chain broken?

Working with an ineffective supply chain can be time consuming, complicated, and reduce the quality of your finished product. Use our checklist below to find out if your supply chain may have any issues.

## 1 Increase in quality failure due to supplier error

---

- a. Your supplier's increase in volume due to your large order requires them to hire new labor, which is not as skilled at meeting your demands

**A fully automated facility limits human error, while even running 24/7. All pieces are created to the same exacting specifications no matter the run order size.**

## 2 Increase in complexity of the supply chain

---

- a. You work with a different vendor for cutting, fabrication, finishing, painting, etc.
- b. You spend a significant amount of time coordinating your supply chain

**With a one-stop automation facility, this is all handled in house. These facilities are essentially a supply chain of one.**

## 3 You need your whole supply chain to have certain certifications

---

- a. Difficult to find a vendor for every step that meets these requirements
- b. Difficult to onboard new suppliers
- c. Organizing the validation of these certifications is becoming time consuming

**If a single source supplier has all the certifications you need, you can feel confident that your project is expertly handled in a facility that meets your requirements the entire timesupply chain of one.**

## 4 An overseas portion of your supply chain is causing issues

---

- a. Difficult to troubleshoot issues in a different language in an alternate time zone
- b. Other nations can be subject to geopolitical unrest

**If you work with an American Company that keeps the entire supply chain in house, you can control quality and solve any issues that arise quickly and easily, while keeping jobs in the US "and benefiting the American economy.**

## 5 You have a limited ability to improve product process of the supply

---

- a. Each supplier can only affect their portion of production
- b. No ability to consolidate or optimize

**A fully integrated facility works with you at every step of the process, and has the ability to adjust all aspects of production to increase quality and save time and money.**

## 6 You have to frequently check your material NDA due to supply chain

---

- a. Wide dissemination of delicate information makes it delicate to control

**A single source supplier keeps all data in house, preventing information leaks.**
